The image shows a comprehensive cheat sheet for pandas data wrangling. It is organized into several sections:
1. **Tidy Data**: Explains the foundation for wrangling in pandas, including data types (rows, columns, observations) and how they relate to pandas data structures.
2. **Syntax - Creating DataFrames**: Provides code examples for creating DataFrames from lists, dictionaries, and other sources.
3. **Reshaping Data**: Details methods for changing the layout of a data set, such as `pd.melt()`, `pd.pivot()`, and `pd.pivot_table()`.
4. **Subsetting**: Divided into 'Subsetting Observations (Rows)' and 'Subsetting Variables (Columns)', showing various indexing and filtering techniques.
5. **Method Chaining**: Illustrates how to chain pandas methods to perform complex operations in a single line of code.
